No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: GATY L. Breton et al.
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
RUMBER OF SEQ ID NOS: 8252
ENGTH: 346
TYDE: 1939-06-04
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                   1528

(BADI) BASF

Increasing the polysaccharide, especially starch, content of plants, transforming with a sequence encoding dihydro-orotase. γď

Example 4; Page 30-31; 32pp; German.

This invention describes a novel use of a DNA sequence (I) encoding dihydro-orotase (II) to prepare plants which have increased polysaccharide (PS) content. The invention also describes (1) a 1271 base polysaccharide (PS) content. The invention also describes (1) a 1271 base polysaccharide (PS) content. The invention also describes (1) a 1271 base it and its homologs (or their fragments); (2) method for preparing plants of increased PS content by expressing (II) in them; (3) method for transforming plants by introducing an expression cassette, containing promoter, signal sequence and (I), into a plant cell, callus tissue, complete plant or protoplast; and (4) plants with increased PS content containing the DNA of (I). Expression of (II) increases the content of orotic acid (a precursor of uridine nucleotides), resulting in an increased rate of starch synthesis. Typically, in potato tuber slices,

The Beta vulgaris genes of the invention encode the proteins: casein kinase alpha catalytic subunit; dihydroorotase; translation initiation factor 1A; putative protein; and an unknown protein. The Beta vulgaris genes of the invention are useful for enhancing the osmotic and oxidative stress tolerance of a plant. The Beta vulgaris genes are also useful for stimulating plant growth. The casein kinase alpha catalytic subunit gene is useful for controlling the process of flowering in a plant. The present amino acid sequence represents the Beta vulgaris dihydroorotase

ct the 5213 antisense sequences given in the specification where expression confirmation of a cell. Also included are:

((1) a vector comprising a promoter operably linked to the nucleic acid conding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (4) an antibody capable of specifically binding compound that inhibited by the containing the vector; (4) an isolated containing the vector; (4) an isolated for containing the vector; (4) profileration of an organism acts; (4) an antibody capable of a prodiferation of an isolated product it is overexpressed or underexpressed; (12) determining the extent containing the activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent containing the vector of a compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent containing the vector of a containing the vector of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational contained for cellular proliferation to isolate candidate molecules for rational contained for cellular proliferation in cells other than S. aureus, S. typhimurium, C. patent did not form part of the printed specification, but was obtained in electronic format directl

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC nucleic acid; (4) an antibody capable of specifically binding CC polypeptide or its fragment whose expression is inhibited by the antisense cc polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for crequired for proliferation, (7) identifying a compound that influences the activity of identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an activity against a biological pathway in which a proliferation-required gene or its gene product lies or pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or the biological pathway in which a proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for for cellular proliferation to isolate candidate molecules for rational required drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, the target prokaryotic essential genes. Claim 25; SEQ ID NO 77674; 1766pp; English isolate candidate molecules for rational drug

```
Co polypeptide or its fragment whose expression is inhibited by the control or its fragment whose expression is inhibited by the collisers nucleic acid; (4) an antibody capable of specifically binding control or the polypeptide; (6) inhibited by the collisers or the polypeptide; (6) inhibited by the polypeptide; (6) inhibited by the collisers or the polypeptide; (6) inhibiting cellular collisers or proliferation or the activity of a gene in an operon required for collisers or required for proliferation, or that inhibite goalmant a biological pathway or the proliferation, or that inhibite pathway of identifying a gene required for cellular proliferation or the biological pathway in which hat proliferation, or that inhibite gene product lies or agene on which the test compound that inhibite proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound acts in the proliferation of an organism acts; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibite proliferation of grains; or (13) identifying the target of a compound that inhibits the gene collection of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational content of the target prokaryotic essential genes. Note: The sequence is encoded by one of the target prokaryotic essential sense. Note: The sequence data for this content did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained content of the printed specification of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (1) a vector comprising a promoter operably linked to the nucleic acidencoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 e 6213 antisense sequences given in the specification where expres
the nucleic acid inhibits proliferation of a cell. Also included
